

Patient Name: Yutheshtrran Shanmmuganayagam

Date of Visit: 21 November 2025

Date of Birth: *[Insert DOB]*

Patient ID: *[Insert ID]*

Physician: Dr. R. Fernandes, MD – Dermatology

Clinic: BrightDerm Skin & Allergy Centre

Chief Complaint

Patient reports **itchy red rashes** primarily on the arms and upper torso for the past 5 days.

History of Present Illness

- Rash began as small red patches on the right forearm.
 - Gradually spread to upper arms and chest area.
 - Itching worsens at night.
 - No recent changes in detergents, soaps, or skincare products.
 - Denies fever, joint pain, or breathing difficulty.
 - No known allergies.
 - No prior similar episodes.
-

Physical Examination

- **Skin:**
 - Multiple erythematous (red), slightly raised patches measuring 1–3 cm.
 - Mild scaling observed.
 - No open wounds, blistering, or signs of secondary infection.
 - **Vitals:**
 - Temperature: 36.8°C
 - Pulse: 78 bpm
 - Blood Pressure: 118/76 mmHg
 - Respiratory Rate: 16/min
-

Assessment / Diagnosis

Findings are most consistent with **Allergic Contact Dermatitis** or **Eczema flare**.
Secondary infection not observed at this time.

Plan / Treatment

1. **Topical Medication:**
 - Hydrocortisone 1% cream: Apply thin layer twice daily for 7 days.
2. **Antihistamine:**
 - Cetirizine 10 mg once daily for itching.
3. **Skin Care Instructions:**
 - Avoid scratching.
 - Switch to fragrance-free soap and laundry detergent.
 - Keep skin moisturized with hypoallergenic moisturizer.
4. **Follow-Up:**
 - Review symptoms in 7–10 days or sooner if rash worsens, spreads, or if fever develops.
